RESEARCH ARTICLES

Kasamatsu, F., Nishiwaki, S., Ishikawa, H.
Breeding areas and southbound migrations of southern minke whales *Balaenoptera acutorostrata* 1–10

Bailey, K. M., Canino, M. F., Napp, J. M., Spring, S. M., Brown, A. L.
Contrasting years of prey levels, feeding conditions and mortality of larval walleye pollock *Theragra chalcogramma* in the western Gulf of Alaska 11–23

Limburg, K. E.
Otolith strontium traces environmental history of subyearling American shad *Alosa sapidissima* 25–35

Townsend, D. W., Radtke, R. L., Malone, D. P., Wallinga, J. P.
Use of otolith strontium:calcium ratios for hindcasting larval cod *Gadus morhua* distributions relative to water masses on Georges Bank 37–44

Pakhomov, E. A.
Demographic studies of Antarctic krill *Euphausia superba* in the Cooperation and Cosmonaut Seas (Indian sector of the Southern Ocean) 45–61

Gómez, J. G.
Distribution patterns, abundance and population dynamics of the euphausiids *Nyctiphanes simplex* and *Euphausia eximia* off the west coast of Baja California, Mexico 63–76

Øresland, V.
Winter population structure and feeding of the chaetognath *Eukrohnia hamata* and the copepod *Euchaeta antarctica* in Gerlache Strait, Antarctic Peninsula 77–86

Jónasdóttir, S. H., Fields, D., Pantoja, S.
Copepod egg production in Long Island Sound, USA, as a function of the chemical composition of seston 87–98

Klein Breteler, W. C. M., Gonzalez, S. R., Schogt, N.
Development of *Pseudocalanus elongatus* (Copepoda, Calanoida) cultured at different temperature and food conditions 99–110

Chae, J., Nishida, S.
Vertical distribution and diel migration in the iridescent copepods of the family Sapphirinidae: a unique example of reverse migration? 111–124

Kivi, K., Setälä, O.
Simultaneous measurement of food particle selection and clearance rates of planktonic oligotrich ciliates (Ciliophora: Oligotrichina) 125–137

Freire, J., González-Gurriarán, E.
Feeding ecology of the velvet swimming crab *Necora puber* in mussel raft areas of the Ría de Arousa (Galicia, NW Spain) 139–154

Pranal, V., Fiala-Médioni, A., Colomines, J. C.
Amino acid and related compound composition in two symbiotic mytilid species from hydrothermal vents 155–166

Tokeshi, M., Romero, L.
Filling a gap: dynamics of space occupancy on a mussel-dominated subtropical rocky shore 167–176

Cronin, G., Hay, M. E., Fenical, W., Lindquist, N.
Distribution, density, and sequestration of host chemical defenses by the specialist nudibranch *Tritonia hamnerorum* found at high densities on the sea fan *Gorgonia ventalina* 177–189

Espoz, C., Guzmán, G., Castilla, J. C.
The lichen *Thelidium litorale* on shells of intertidal limpets: a case of lichen-mediated cryptic mimicry 191–197

Skadsheim, A., Christie, H., Leinaas, H. P.
Population reductions of *Strongylocentrotus droebachiensis* (Echinodermata) in Norway and the distribution of its endoparasite *Echinomermella matsi* (Nematoda) 199–209

Coma, R., Gili, J.-M., Zabala, M.
Trophic ecology of a benthic marine hydroid, *Campanularia everta* 211–220

Wieczorek, S. K., Clare, A. S., Todd, C. D.
Inhibitory and facilitatory effects of microbial films on settlement of *Balanus amphitrite amphitrite* larvae 221–228

Michael, T., Smith, C. M.
Lectins probe molecular films in biofouling: characterization of early films on non-living and living surfaces 229–236

Lorenzen, J., Glud, R. N., Revsbech, N. P.
Impact of microsensor-caused changes in diffusive boundary layer thickness on O_2 profiles and photosynthetic rates in benthic communities of microorganisms 237–241

Enríquez, S., Duarte, C. M., Sand-Jensen, K.
Patterns in the photosynthetic metabolism of Mediterranean macrophytes 243–252

Santos, R.
Size structure and inequality in a commercial stand of the seaweed *Gelidium sesquipedale* 253–263

Cronin, G., Lindquist, N., Hay, M. E., Fenical, W.
Effects of storage and extraction procedures on yields of lipophilic metabolites from the brown seaweeds *Dictyota ciliolata* and *D. menstrualis* 265–273

Nielsen, K., Nielsen, L. P., Rasmussen, P.
Estuarine nitrogen retention independently estimated by the denitrification rate and mass balance methods: a study of Norsminde Fjord, Denmark 275–283

Lee, S., Kang, Y.-C., Fuhrman, J. A.
Imperfect retention of natural bacterioplankton cells by glass fiber filters 285–290

Moriarty, D. J. W., O'Donohue, M. J.
Organic carbon transport from the Southern Ocean and bacterial growth in the Antarctic Intermediate Water masses of the Tasman Sea 291–297

NOTES

Lindley, J. A., Gamble, J. C., Hunt, H. G.
A change in the zooplankton of the central North Sea (55° to 58° N): a possible consequence of changes in the benthos 299–303

Jury, S. H., Howell, W. H., Watson, W. H. III
Lobster movements in response to a hurricane 305–310

Jaramillo, E., McLachlan, A., Dugan, J.
Total sample area and estimates of species richness in exposed sandy beaches 311–314

MARINE ECOLOGY PROGRESS SERIES

HISTORY: Marine Ecology Progress Series (MEPS) was established in response to requests from numerous marine ecologists from all over the world. When founded, MEPS was based on 'Marine Ecology' – the first comprehensive, integrated treatise on life in oceans and coastal waters – conceived, organized and edited by Professor Otto Kinne, and published by John Wiley & Sons.

AIM: MEPS serves as a world-wide forum for all aspects of marine ecology, fundamental and applied. The journal covers: microbiology, botany, zoology, ecosystem research, biological oceanography, ecological aspects of fisheries and aquaculture, pollution, environmental protection, conservation, resource management.
Ecological research has become of paramount importance for man's future. The information presented here should, therefore, encourage critical application of ecological knowledge for the benefit of mankind and, in fact, of life on earth. Marine Ecology Progress Series has received recognition as the leader in its field. The journal strives for

- complete coverage of the field of marine ecology
- the highest possible quality of scientific contributions
- quick publication
- a high technical standard of presentation.

SCOPE: MEPS is international and interdisciplinary. It presents rigorously refereed and carefully selected research articles, reviews and notes, as well as comments, concerned with:

Environmental Factors: Tolerances and responses of marine organisms (microorganisms, autotrophic plants, and animals) to variations in abiotic and biotic components of their environment; radioecology.

Physiological Mechanisms: Synthesis and transversion of organic material (mechanisms of auto- and heterotrophy); thermo-, ion-, osmo- and volume-regulation; stress resistance; non-genetic and genetic adaptation; population genetics; orientation in space and time; migrations; behavior; molecular basis of ecological processes.

Cultivation: Maintenance and rearing of, as well as experimentation with, marine organisms under environmental and nutritional conditions which are, to a considerable degree, controlled; analysis of the physiological and ecological potential of individuals, populations and species; determination of nutritional requirements; ecological aspects of aquaculture; water-quality management; culture technology.

Dynamics: Production, transformation, and decomposition of organic matter; flow patterns of energy and matter as these pass through organisms, populations and ecosystems; biodiversity; variability of ecosystem components; trophic interrelations; population dynamics; plankton ecology; benthos ecology; estuarine and coastal ecology; wadden-sea ecology; coral reef ecology; deep-sea ecology; open-ocean ecology; polar ecology; theoretical ecology; ecological methodology; ecological modelling and computer simulation.

Ocean Management: Human-caused impacts: their role as modifiers and deformers of living systems, their biological consequences and their management and control; inventory of living resources in coastal areas, estuaries and open oceans; ecological aspects of fisheries; pollution of marine areas and organisms; protection of life in the seas; management of populations, species and ecosystems; management of coastal zones and sea areas; biotechnology.

Scientific publications appearing in this journal have been rigorously refereed, carefully quality-improved, and professionally selected by our editorial staff. These publications, and all parts thereof, are protected by copyright. This covers the exclusive rights of the publisher to *reproduce* (by any means, including photographic or electronic), to *distribute* (including via photocopies, reprints, or electronic means), and to *store* on microfilm, in electronic data bases, on video disks, etc., this material. The acceptance regulations of a manuscript for publication automatically include the consent of the author(s) to transfer the copyright to the publisher. Permission for exceptions to these rules must be obtained in writing from the publisher at the time of manuscript submission.
In the USA, photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee (US $3.00 per article) is paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA.

Publisher, editors and authors do not accept legal responsibility for errors, omissions or claims, nor do they provide any warranty, express or implied, with respect to information published in MEPS.

Tables of contents and *tables of contents with abstracts* for MEPS are available free of charge on the Internet via World Wide Web (http://www.int-res.com/int-res).
